# Horizontal Braider Puller Systems

SteegerUSA Horizontal Braiding machines can be equipped with different pulling systems to meet the needs of the customer. The standard pulling option, Witels Albert, is great for small diameter tubes and manufacturing environments where mandrel size changes are infrequent. The jaws on the upgraded Versa puller are self-centering, so there is no height adjustment required when swapping product sizes. This upgraded puller system is best for customers who focus in R&D, plan to run multiple size products or if the products OD is larger than 10mm.

STEEGER USA

## PRODUCT RANGE (OD):

Witels: 0 to 10mm  
Versa: 0 to 50mm

## BAND WIDTH:

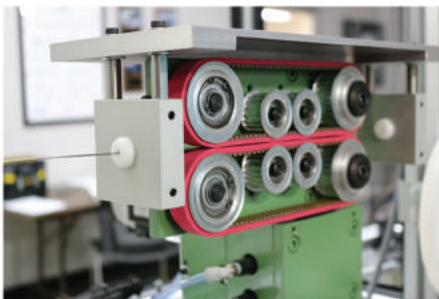

Witels: 15.5mm  
Versa: 50mm

## CENTERLINE ADJUSTMENT

Witels: **Manual**  
Versa: **Automatic**

## Witels Albert Puller

This puller is best for dedicated product lines that only one product planned to be used on it, or products with similar ODs, and for products that have already been qualified with this puller in the past.

## Versa Puller

The Versa puller is best for customers who focus in R&D, plan to run multiple size products, or if the products OD is larger than 10mm.
